

## DV Balancer® and Balancer® ENG – A new type of shoulder support

**DV Balancer®**  
compact for transport

The DV Balancer® comfortably places camcorders with built-in viewfinders in front of the eye leaving the hands free for camera control.

Shoulder support for cameras up to 4 kg, adjusts vertically and horizontally allowing the user to view the viewfinder eyepiece. The weight of the camera will be absorbed by the shoulder pad and the chest rest leaving the hands free to control the camera. The camera attachment allows a direct "docking" on all Chrosziel light-weight supports of the 401-4xx series, additional to the 1/4" fastening screw and rubber cushion. For transporting, the chest rest and shoulder unit are separated. The so-called "Memory Clip" stores the individual adjustment, for immediate re-installation after unpacking.

**New!**

**DV Balancer® ENG**  
for classical angled  
viewfinders and  
**DSLR-** cameras  
with video function.
